

Common Name: Crysanthimum/ Guldaudi

Chrysanthemum Indicum

Order: Asterales

Family: Asteraceae

Genus:
Chrysanthemum

Species: Indicum

DESCRIPTION

- They are native to East Asia and Northeastern Europe. Most species originate from East Asia and the center of diversity is in China.
- The genus Chrysanthemum are perennial herbaceous flowering plants, sometimes subshrubs. The leaves are alternate, divided into leaflets and may be pinnatisect, lobed, or serrate (toothed) but rarely entire; they are connected to stalks with hairy bases.
- It is a natural source of insecticide
- Chrysanthemum plants have been shown to reduce indoor air pollution by the NASA Clean Air Study
- Chrysanthemum leaves are steamed or boiled and used as greens, especially in Chinese cuisine
