

Jasmine

*Tabernaemontana
divaricata*

DESCRIPTION

- It is a beautiful evergreen flowering shrub native to India. The plant generally grows to a height of 1.5–1.8 meters (5–6 ft). The (single) flowers have the characteristic 'pinwheel' shape.
- The species is known to produce many alkaloids. In Indian Ayurveda it has been used for dental caries, for scabies, as cough medicine and for eye ailments (like burning sensation).
