

Name: Moclame ficus

DESCRIPTION

- Moclame is a tropical tree with smooth light-gray bark and entire oblanceolate leaves about 2–2.5 inches (5.1–6.4 centimeters) long which in Mediterranean climates grows to about forty feet (twelve meters) tall.
- It is native in a range from China through tropical Asia and the Caroline Islands to Australia.
- Popularly in India it is used as ornamental plant also used in traditional medicine in India, Malaysia, China and Japan. In Japan, the bark, the aerial roots and dried leaves are traditionally used against pain and fever, while in China the plant is traditionally used among others against the flu, the malaria, bronchitis and rheumatism.
